TECHNICAL SKILLS

Languages: Python, Go, JavaScript, TypeScript, SQL

Backend Frameworks: Django, Django REST Framework (DRF), Celery, GoFiber, Express.js

Databases: PostgreSQL, MongoDB · Django ORM, multitenancy

Caching & Messaging: Redis, Kafka

Cloud & DevOps: Docker, AWS (EC2, ECS, S3, IAM), Github Actions CI/CD

APIs & Tooling: REST API design, WebSockets, gRPC, Swagger, Nginx, Git, Prometheus, Grafana, Elasticsearch

EXPERIENCE

Software Development Engineer

November 2024 – Present

Kazam EV Tech

Bengaluru, India

- Shipped the founding backend for a national EV-charging interoperability platform on the Beckn protocol, orchestrating real-time discovery and transactions across HPCL/BPCL partner networks — **3,420+** chargers and **20,000** daily transactions, the first cross-network discovery at national scale — via REST APIs and **Go** microservices.
- Eliminated duplicate charges and ghost transactions by designing a webhook-driven, idempotent order/payment lifecycle over **PostgreSQL** with state-machine reconciliation, guaranteeing zero data loss under partial failures and network retries across **20,000+** daily transactions.
- Eliminated **5–8** manual settlement reconciliations per week by building automated ledger reconciliation and refund/cancellation workflows, hardening settlement reliability and removing recurring manual discrepancies.
- Delivered a multi-tenant SaaS platform (**Node.js**, PostgreSQL) with custom multi-tenancy and role-based access control (RBAC), now serving **1,200+** vendors/technicians across **20+** isolated OEM tenants.
- Cut internal workflow execution time 80% by building **TypeScript/Node.js** services exposing ERP, EV-charging, and financial REST APIs as tool interfaces for **15+** LLM-driven agent workflows.

Software Development Engineer

October 2023 – October 2024

Alemeno

Remote (Bengaluru, India)

Client – GradeHunt

- Shipped and maintained **Python / Django REST Framework** (DRF) backend APIs serving **400,000+** students, using **Celery** for async task processing and **Dockerized** multi-node deployments with rolling releases for zero-downtime updates.
- Cut API response times **65%** on high-traffic DRF endpoints by introducing a **Redis** caching layer, improving peak-load performance with no changes to the Django ORM models or database schema.
- Built per-tenant data isolation for a multitenant diagnostic SaaS serving **12+** diagnostic-center tenants on **Python/Django** (django-multitenants) over PostgreSQL, eliminating cross-tenant data-leakage risk while sharing infrastructure.

PROJECTS

Pujo Atlas Kolkata — Pandal Discovery App (Founding Engineer) [🔗](#) | *Go, Mapbox, Postgres*

- Architected the backend for a real-time civic-tech platform handling **871K** searches and **10.8K** daily active users at peak festival traffic — built for burst load without over-provisioning.
- Built a geospatial discovery layer (Mapbox + PostgreSQL) delivering proximity-based pandal search at sub-**200ms** across thousands of geo-indexed locations.

Mattermost — Open Source Contributions [🔗](#) | *Go, React, Postgres*

- Implemented a configurable Do-Not-Disturb scheduling system end-to-end (data model → API → frontend), shipped via peer-reviewed PRs with full test coverage across global maintainer collaboration.

EDUCATION

Government College of Engineering and Ceramic Technology

Kolkata, WB

Bachelor of Technology in Information Technology

2020-2024

CGPA:- **9.12**
